Abstract:

Problem to be solved: To open an electronic shop by a method which can speedily cope with alteration and addition of shop information and commodity information by storing information on the shop and commodities on a mall server side and remotely operating it from the shop side at need.

Solution: An electronic shop client 3 defines electronic shop definition information 7 by a means 4 which defines the electronic shop through an input/output device 31. On the mall server 2, a means 5 which generates an electronic shop opening information 8 generates electronic shop opening information 8 on the basis of the electronic shop definition information 7. When a display of the electronic shop opening information 8 is indicated from an input/output device 11 on the side of a purchaser client 1, a means 6 which generates display information from the electronic shop opening information 8 is actuated through a WWW browser 12 and a WWW server CGI 21. A means 6 which generates display information from the electronic shop opening information 8 refers to the electronic shop opening information 8 and generates display information to be shown to the purchaser client 1.
